

Requisition Title
Solution Architect

Develop and maintain high-level design plans for the overall applications, data, and infrastructure architectures. Provide technical leadership, from senior level decision making down to the project planning level. Gain commitment for high-level plans, initiate and participate in projects to evaluate technologies and methods of implementation.

Take responsibility for the functional design and architecture of application systems across all technologies and platforms

- Develop high-level product specifications with attention to system integration and feasibility
- Defines all aspects of development from appropriate technology and workflow to coding standards

Assesses business requirements and technology alternatives

- Build multi-platform technology consensus across business units; evaluate or pilot new technologies
- Implement new technologies in medium and large-scale environments
- Design application's technical infrastructure, such as specific databases, programming languages, utilities, and testing approaches
- Uses tools and methodologies to create representations for functions and user interface of desired product
- Oversee progress of development team to ensure consistency with initial design
- Provide technical guidance and coaching to developers and engineers
- Determine functional and non-functional requirements for new software or applications
- Ensure software meets all requirements of quality, security, modifiability, extensibility, etc.

Solid Experience in Java stack, APIs, Microservices, Agile Development is a must. G7 to G9 position, minimum IT experience will be around 15 years in my view... no issue if it's higher.

Airline industry experience will be a big plus, especially in the Crew domain. – Please highlight if anyone has this experience.
